Form Talysurf®
CNC Series

Versatile, high range, high resolution system for automated surface finish and contour inspection
While the use of highly automated manufacturing systems in automotive production is well established, quality control has remained a manual process. The arrival of the Form Talysurf® CNC Series for automated quality control will change that.

The system can be programmed to your individual requirements for analysis of crankshafts, heads, blocks, gear box casings and much more.

The Form Talysurf® CNC Series is supplied with Taylor Hobson’s Q-Link production interface, software that meets the Industry 4.0 philosophy.

Q-Link is designed for shop floor environments and provides direct communication with SPC software which delivers feedback to your manufacturing process.

Component handling and loading is made easy with dedicated fixtures. Operator mistakes can be prevented with programmed measurement routines and the simultaneous fast axis movements to reduce cycle times and increase throughput.

An excellent investment.

- Transmission housings
- Cylinder heads and blocks
- Crankshafts and camshafts
- Valves and pistons
- Gears, conrods and injectors
- Hydraulic components

Measurement integrity and reproducibility.

1. **High accuracy gauge.**
   World-leading 5 mm gauge with 0.4 nm resolution and unique temperature compensation as standard.

2. **Traverse tilt.**
   Motorised ±9° tilt or manual 9°-45° tilt traverse unit, enables the measurements of fillet radii on crankshafts and valve seats on cylinder heads.

3. **Precision column.**
   Available in 700 mm or 1000 mm height. Programmed to automatically move on the motorised Y-axis stage.
4 Traverse unit.
Available in 120 mm or 200 mm length, the traverse unit enables measurement over large multi-featured parts.

5 Fixtures.
Dedicated stable fixtures designed for fast fitting and set-up of components.

6 Full component access.
Precise control via rotary and 300 mm X-stage for fast, simultaneous and accurate component positioning.

7 Granite base.
The base is made out of high-grade granite to provide high vibration damping, thermal inertia and stiffness throughout the measurement cycle.

8 Anti-Vibration system.
Self levelling, passive air mounts work in conjunction with the steel support frame to reduce measurement noise in shop floor environments.

9 Support steel frame.
Strong rigid steel support frame; includes heavy duty levelling mechanism for all four legs.

10 ECU cabinet.
Industrial electrical PC cabinet designed to control temperatures and optimise cooling.

11 Ultra software.
Powerful analysis software for all parameters. Unique user interface tailored to the needs of the operation.
Taylor Hobson has developed the Q-Link interface to support automation, data exchange and process control in manufacturing environments.

The Q-DAS accredited production interface is designed for shop floor environments and provides direct communication with SPC software, which delivers feedback to your manufacturing process.

This form of monitoring is used widely in automotive and aerospace component manufacturing, where data and strict standard operating procedure control is mandatory.

**User benefits.**

- Programs reduce operator mistakes.
- Programmed measurement routines reduce cycle times and increase throughput.
- Display traceable pass/fail results and automatic summary reports.
- Historic traceability is made possible via data exchange and part tracking.
- Control can be managed by barcode scanners or tracking/auditing system.
- Statistics such as automatic R&R studies.
- Tolerancing - Visually identifies the parameter and tolerance band.

Taylor Hobson metrology directly monitoring production.

The Form Talysurf® CNC Series not only continues a tradition of taking measurement accuracy to the next level, but reflects the evolution of the manufacturing industry.

"Meeting manufacturing challenges is at the heart of our business"

Dr. Bob Bennett, Technical Director – Taylor Hobson Ltd.
Industry 4.0 in action.

All of the critical components for the Form Talysurf® systems are manufactured in-house at our UK facility, with unique serial numbers for worldwide traceability.

Taylor Hobson has invested in the latest machining techniques to deliver measurement integrity through manufacturing excellence.

“Our strong investment meets the demands of high technology manufacturing”

Tim Garner, Operations Director.
– Taylor Hobson Ltd.

Taylor Hobson’s latest investment includes the Mazak Integrex i-200S with 10 axis, twin spindle, in cycle probing, tool break detection, unmanned running, temperature control, zero set up times, auto re-loading, high accuracy glass scales and 110 tool capacity.

Typical applications
Crankshafts, heads, blocks, gear box casings, camshafts, gears, conrods, injectors, valves, pistons, ball screws and hydraulic components.
Unparalleled measurement capability

Form Talysurf® CNC Series.
Designed with the operator in mind.

System benefits and features.

- **Cycle times are greatly reduced**
  Up to 8 axes of motion
- **High accuracy gauge**
  World-leading 5 mm gauge with 0.4 nm resolution
- **Temperature compensation**
  Ensures consistent system performance and high measurement integrity, regardless of environmental effects
- **Fully automated measurement**
  With evaluation and SPC analysis
- **Simple user friendly interface**
  Ideal for programming and analysis
- **Customisable fixtures and workholdings**
  Part identification using RFID and barcodes
- **1.5 metre granite base for workpieces**
  Up to 400 mm in size and weight up to 150 kg*
- **Robust measurement solution**
  Suitable for all environments

System options.

**Form Talysurf® CNC 2000 Series**

CNC 2150 & 2075 - Suitable for large engine heads and blocks.

- 700 mm column with ±9° motorised tilt.
- 200 mm traverse unit.
- Automated gauge stem rotation.
- CNC 2150 - weight capacity up to 150 kg*, ideally suited to 6 cylinder blocks and heads.
- CNC 2075 - weight capacity up to 75 kg*, ideally suited to 4 cylinder blocks and heads.

**Form Talysurf® CNC 1000 Series**

CNC 1150 & 1075 - Suitable for large crankshafts or transmission housings.

- 700 mm column with +9-45° manual tilt.
- 120 mm traverse unit.
- Manual gauge stem rotation.
- CNC 1150 - weight capacity up to 150 kg*, ideally suited to 6 cylinder crankshafts and camshafts.
- CNC 1075 - weight capacity up to 75 kg*, ideally suited to 4 cylinder crankshafts and camshafts.

* Includes weight of fixture.
Powerful analysis software.
Dedicated packages available.

Analysis capabilities.

Save time and money - one measurement, multiple results.

Ultra Software - Powerful analysis software for all parameters. Choose Taylor Hobson’s optional production interface to automate control and reporting. Customisation through Taylor Hobson’s unique user interface tailored to the needs of the operator, with customisable menus, displays and user levels.

Surface analysis
- Form
- Radius
- Roughness
- Waviness
- Dominant wavelength

Contour analysis
- Radius
- Angle
- Height
- Length
- Distance and more

3D analysis
Use our optional TalyMap® 3D software to transform your conventional 2D measurements into 3D analysis results.
Expanding your capability

Full automation with a wide variety of fixtures and different axis configurations.

Optional accessories.

**Automated rotation system.**
Fully automated 360° axial gauge rotation for surface finish and form measurements of internal bores and between faces.

**Customisable user interface.**
Unique user interface tailored to the needs of the operator; with customisable menus, displays and user levels.

**Wide range gauge.**
Increase your system flexibility by changing to the wide range gauge to increase your gauge range to 28 mm and to fulfil your contour requirements.

**Right angle attachment.**
90° gauge attachment to allow access to features inaccessible by inline measurement.

**Automated part identification.**
Fully automated part identification and program operation via RFID or barcode.

Simply place the component onto the system and read the tag or barcode and the software automatically selects the correct program and initiates the measurement routine, removing any operator involvement or error.
Meeting the ever increasing demands of next-generation technologies.

**Cylinder blocks and heads.**
- Form, surface finish and angle of valve seats and guides
- Deck face surface finish and form
- Surface finish and form - Cylinder, balancer, crankshaft and camshaft bores
- Geometry of threaded holes

**Crankshafts and camshafts.**
- Geometry and surface finish of fillet radii between thrust faces and pin bearings
- Form, geometry and surface finish of the pin and main bearings
- Tooth surface finish and geometry
- Cam heal and toe geometry

**Transmission housings.**
- Surface finish and waviness of sealing faces and inlet bores
- Automated surface flatness of sealing faces

**Gears.**
- Deviation of root radius from design
- Surface finish and individual tooth profile
- Form measurement of splines
Taylor Hobson has a long history with advanced manufacturing, this association has helped to evolve powerful software solutions to suit your applications.

**DXF Creator**
A utility that allows creation of DXF data, enabling comparison of design profile to part profile.
- Logarithmic equation
- Free form equations
- Tolerance zones

**Data fusion**
Where components profiles are demanding in angle and form, complete analysis can be made by fitting several measured profiles together into one profile using the patented data fusion process.

**Dominant Wavelength**
This analysis function isolates the two most dominant wavelengths contained within a surface. This allows manufacturers to track and isolate errors, control process and predict function.

**Advanced Dual Profile**
A sophisticated comparison tool that allows testing of:
- Wear
- Repeatability
- Noise

**Remote access**
Using the ‘remote access’ feature in the Ultra software, a third party application has the ability to run the Ultra program, for example, using a robotic arm to place the part on a fixture.

**TalyMap® Contour**
Allows alignment of measured profiles to design data as well as automated dimensioning.
- Tolerance zones
- Error deviation
- x-offset calculation
**Key features in TalyMap® Contour.**

**Analysis of length, radius, angle and more...**

**Desktop publishing**
Quick & instant report generation.

**Ease of use**
Contour software is easy to use and requires minimal training. Intuitive icon based tools allow the user to define and modify elements and dimensions with the click of a button.

**Automation**
Reports and analysis routines can be saved as single templates and re-applied to component batches.
Special software routines allow full automation regardless of part variation or positional set up ensuring repeatable results.

**Comparison with CAD models**
Load DXF models and automatically fit to the measured profile, results will display deviations, tolerance limits and deviation parameters.

**Full dimensional analysis**
Linear, Angular, Radial and more.

**Q-Link Compatible**
Take advantage of automatic reporting and exporting in Q-Das or text format.

**Further analyses**
Gothic arch profile analysis as standard.
Datum straightness.
To ensure the traverse unit conforms to specifications Taylor Hobson can supply Zerodur straightness standards.
These standards provide certainty in the traverse direction and are combined with special software routines to enhance the measuring axis for correct geometrical form.

Surface finish.
Taylor Hobson can provide glass or metal roughness standards calibrated to an uncertainty of ±(2% + 4 nm) providing measurement confidence and compliance for peak parameters with respect to ISO standards.
Spacing standards are also available to an uncertainty of ±0.6 µm.

Step height.
To ensure the correct gain setting of your instrument, high precision step height standards are available; calibrated with uncertainties down to ±4 nm.

Grating correction.
All our traverse units are tested and enhanced using interferometric techniques ensuring accurate dimensional and surface texture measurement in the x direction.

Traceability.
Taylor Hobson provides full certification for artefacts and instruments in our purpose built ISO graded clean room UKAS facility.
Our UKAS laboratory is able to measure all of the parameters associated with surface texture, including French, German, USA and Japanese derivatives.

Arcuate correction.
The Form Talysurf® systems use a patented ball calibration routine to ensure that both dimensional measurement capability and gauge linearity are dealt with in a single, automated operation.
This fast and simple process uses high-precision spherical calibration artefacts that have been produced to exacting standards and then calibrated for radius and form traceable to international standards.

Full traceability to international standards.
Critical results, trust Taylor Hobson.
Form removal and analysis functions

Form error
Deviation from nominal form is calculated with reference to a best fit straight line, best fit circular arc or best fit conic section.

Form deviation may also be calculated with reference to a minimum zone straight line (the minimum separation between two parallel lines containing the data set).

Radius
Using a least squares best fit, the radius of concave or convex circular arcs can be automatically calculated from selected data. An option to exclude any unwanted features such as edges is also available.

Alternatively, the absolute radius can be set to analyse the actual deviation from a design master. Other calculated parameters include the centre coordinate.

Angle (slope)
Surface tilt can be determined and removed prior to parameter analysis by means of a straight line or minimum zone algorithm. Other calculated values include intercept and pitch.

Dimension
The linear relationship of surface features can be assessed and compared by means of calculated X & Z coordinate positions.

• Datum slope
• Delta slope
• Pitch (between centres)
• Intercept X / Intercept Z

Dual profile
This analysis function enables comparison of one measured profile to another or even to a master profile which has been saved as a template. A ‘difference’ profile can be displayed at the touch of a button and used for further analyses.

Surface finish parameters

Primary parameters
DFTF, LSLP Ave, LSLP Max, Pa, Pc, PCr, PCl, Pd*, Pdc*, Pdq*, PHSC*, Plu, Pln, Plq, Plq*, Pmr*, Pmr(C)*, Pp, PPe*, Pq, PS, PsK, PSm, Pt, Pv, PVo*, Pz, Pz(JIS).

Roughness parameters
R3y, Ra, Rc, RCf, RCr, Rda*, Rd*, Rdq*, RHSC*, Rku, Rln, RLo, Rlq, Rmr*, Rmr(C)*, Rp, Rp1max, Rpe*, Rs, RsK, RSm, Rt, Rv, Rv1max, RVo*, Rz, Rz(DIN), Rz(JIS).

Waviness parameters

Rk parameters and Rk curve
A1, A2, APH, AVH, CV, Mr1, Mr2, Rk, Rpk, Rvk, Rvk/Rk.

R & W parameters
AR, AW, Pt, R, Rke, Rn, Rpke, Rvke, Rx, Sar, Saw, Sr, Sw, W, Wn, Wte, Wx.

Dominant wavelength
WD1c, WD1Sm, WD1t, WD2c, WD2Sm, WD2t, WDSmMax, WDSmMin.

### Electrical

- Instrument and computer voltage: 90 V - 230 V
- Frequency: 47 Hz to 63 Hz
- Supply voltage transients - width: EN 61000 - 4 - 4
- Power consumption: 1000 VA

### Air requirements

- Air pressure: 450 to 1000 kPa (4.5 to 10 bar) (65 to 145 psi)
- Maximum particle size: 5 µm (0.0002")
- Moisture content – dew point: +3 ºC (37 ºF)
- Flow rate at operating pressure: 150 litres / minute (minimum)
- Maximum oil content: 25 mg / m³ (0.01 Grains / ft³)
- Solid particle content: 5 mg / m³ (0.002 Grains / ft³)

### CE conformity

- EMC: BS EN 61000-6-1:2001, BS EN 61000-6-4:2001

### Motorised Y-Axis column stage

- Operation: Software or manual control
- Travel: 700 mm
- Speed: 0.25, 0.5, 1.0, 2.0, 5.0, 10.0, 20.0, 50.0, 100.0 mm/s
- Tortoise Speed: 2.0, 5.0, 10.0, 20.0
- Repeatability: 5.0 µm

### Motorised rotary and linear stage stack

### Instrument base and frame

(Granite base mounted on a steel frame with pneumatic self-levelling anti-vibration mounts)

- Dimensions (mm): 1300 x 1300
- Load capability: 500 kg Centralised load (Stage stack capacity 75 kg)

### Control cabinet

(Contains the PC, electronics and airslide controller)

- Dimensions (mm): 555 x 780 x 800 (W x H x D)
- Load capability: 80 kg

### Measuring station

- Motorized tilting of traverse unit: Optional ±9º Tilt from horizontal (Motorised) + Optional 45º Manual
- Instrument dimensions: See floor plan
- Instrument weight: 1200 kg
- Motorized vertical column: 700 mm (27.6 in), 1000 mm (39.4 in)

### Environment

- Operating temperature: 18 ºC to 22 ºC (64 ºF to 72 ºF)
- Storage temperature: 5 ºC to 40 ºC (41 ºF to 104 ºF)
- Operating humidity: 45% to 75% relative, non condensing
- Storage humidity: 10% to 80% relative, non condensing
- Maximum RMS floor vibration: 3 µm/s (120 µin/s) at < 50 Hz
  6 µm/s (200 µin/s) at > 50 Hz

* Includes weight of fixture.
Safety information

The system is tested to all relevant requirements of:
- BS EN 61010-1, BS EN 349, BS EN 13850, BS EN 983, BS EN 60204

The system is designed to be safe when the following conditions apply:
- The system is located indoors in dry conditions.
- Fluctuations in mains supply voltage do not exceed –10%.
- The altitude does not exceed 2000m.
- The ambient temperature is between 5° and 40°.
- The ambient relative humidity does not exceed 80% for temperatures up to 31°C, decreasing linearly to 50% at 40°C.

Measurement conditions

The quoted technical data is for measurements taken in a metrology laboratory controlled environment: 20°C ±1°C (68°F ± 1.8°F), draft free and isolated from low frequency floor borne vibration.

Uncertainties are at 95% confidence in accordance with recommendation in the ISO guide to the expression of uncertainty in measurement (GUM:1993).
